

## WNMHGB TOS-ERA TRANSPORTER ROOM – PAGE 1

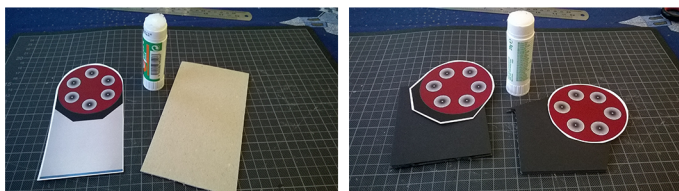

This transporter room is a mod of the original TOS corridors design by OkumArts, the transporter console was designed by lord-liney.deviantart.com (lord-liney.deviantart.com/art/Star-Trek-Transporter-Console-563209661). All artwork was used with permission of the original designers.

## ASSEMBLY INSTRUCTIONS

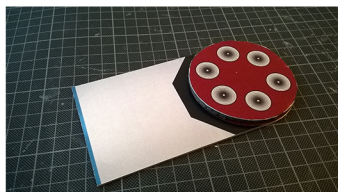

To assemble the transporter room, you basically have to put together its three major parts: the floor and platform, the walls, and the console. The easiest way is to start with the floor and continue with the walls, leaving the console for last. Aside from a print of this set (5 pages, I recommend using 200 g/m<sup>2</sup> cardstock), you will need some 2.5 mm thick grey cardboard (alternatively 2.5 mm black foam core). You will also need a hobby knife, a steel ruler, a pair of scissors, a black marker, a glue stick, and perhaps some regular liquid glue. To assemble the transporter room, just follow the steps below:

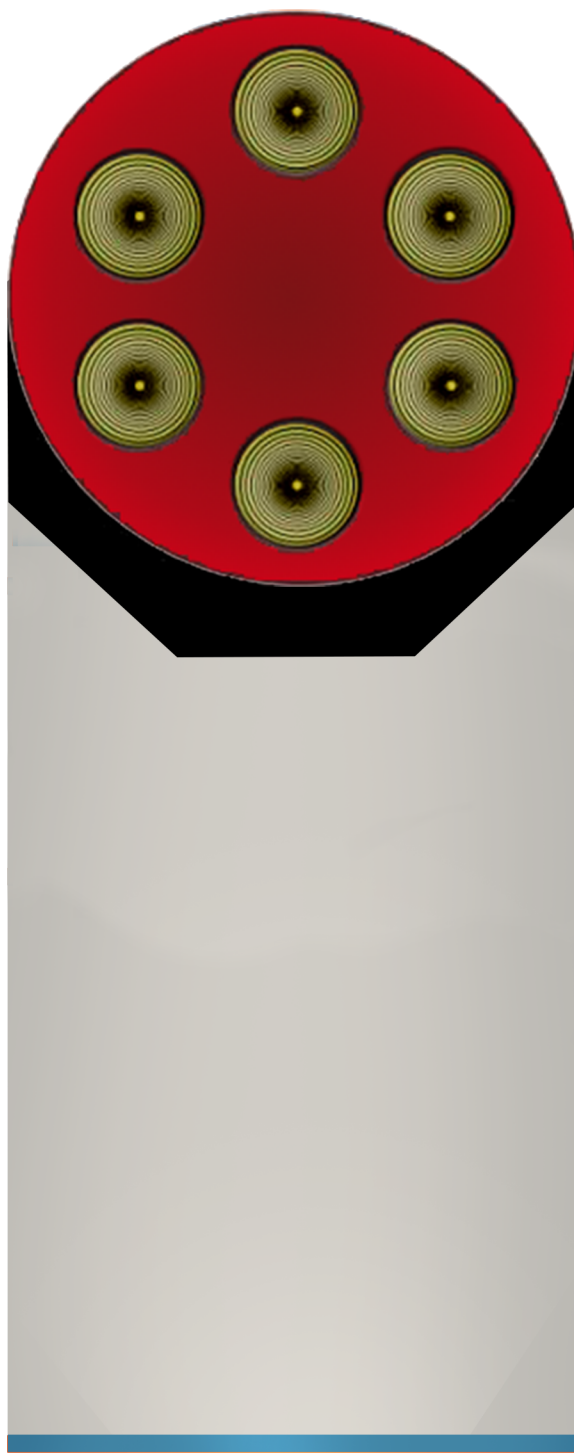

Prepare your print and other materials and start cutting out the major pieces (floor and platform, walls, console).

**Start with the floor.** Glue your print to 2.5 mm grey cardboard for stability. Then glue the two steps of the transporter platform to more of the same cardboard or alternatively to black foam core of the same thickness. Once all pieces have dried, cut them out and stack the transporter pieces precisely onto each other, to create the leveled transporter platform.

The instructions continue on page 3 with the assembly of the walls.

↓ Feed this end into machine cutter ↓

Printing: turn scaling OFF, have centering ON, set to GOOD or BEST setting, Use Matte Photo paper for best results.
