PART 1: CENTER BODY

75mm Base

75mm Base

Print Instructions:
Created with
Windows 7 Paint as
an 8x10.5in BMP and
PNG at 96 DPI. Set
margins accordingly
if necessary and
print at 100%

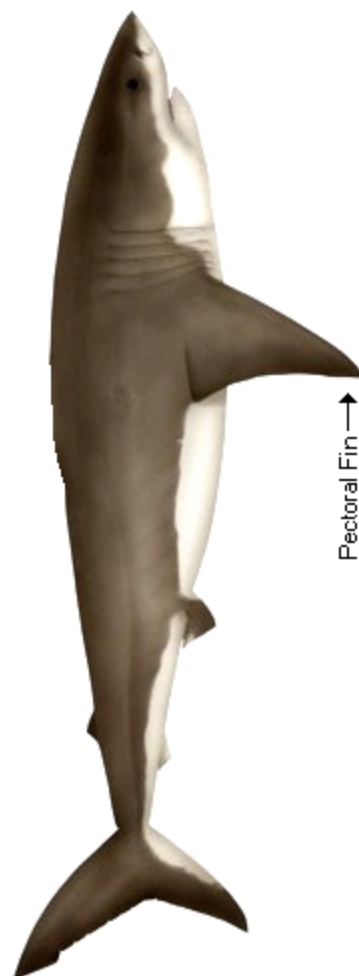

A 25mmx75mm Pill-Shaped Sand or
Water textured base is recommended
for this miniature.

Instructions

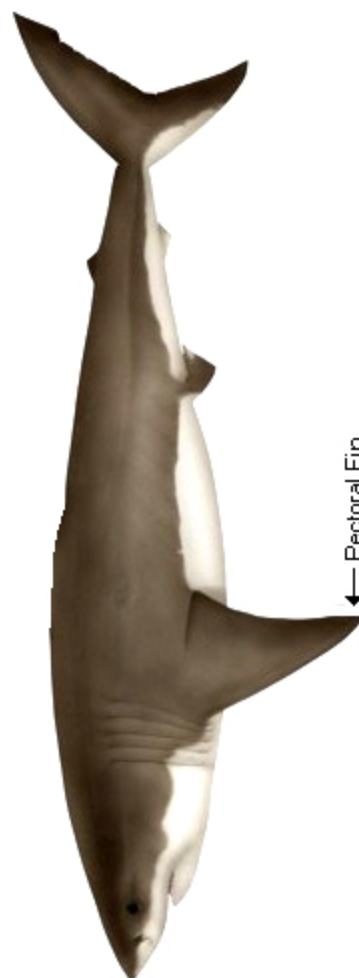

1. Carefully cut out Part 1, the Center Body. A hobby knife may be helpful. Use a dark marker to darken the edges of the paper. Score on the red line in the base and carefully fold, ensuring that both sides of the shark line up as closely as possible.
2. Cut out Part 2, the Right Side using the same care you used with the central body. Use a dark marker to carefully darken the edges of this part and color the back side of the pectoral fin.
3. Do the same thing for Part 3, the Left Side, that you did for Part 2.
4. Carefully glue Part 2 to the right side of Part 1, carefully lining up the nose and tail. Don't overglue or the ink will splotch and hold it tightly for a minute or two. It really isn't a bad idea to let the model dry 10 minutes or more before moving on.
5. Glue Part 3 to the left side of Part 1 with all of the diligence you have used so far. Let the model dry overnight.
6. Now that the model is dry, gently spread the pectoral fins outward from the body until they look right to you.

PART 2: RIGHT SIDE

Pectoral Fin

PART 3: LEFT SIDE
