

Axles, bench and boiler. Only glue the axles at three points, not all four. That way, when you put the wheels on, you can easily adjust them to all touch the ground

Glue these, the governor, and the back rail onto the body. Then it is time for the steering

The steering column is in two parts as fold-overs. On the upper portion, there are two tan fold lines. You want to form a 'V'. The other 'V' gets glued into this space, and the handle bars are glued on top. Glue the lower portion under the footplate and align the upper portion above that.
