

# M-IV HERMAN MEDIUM TANK

## B: Lower Hull Assembly

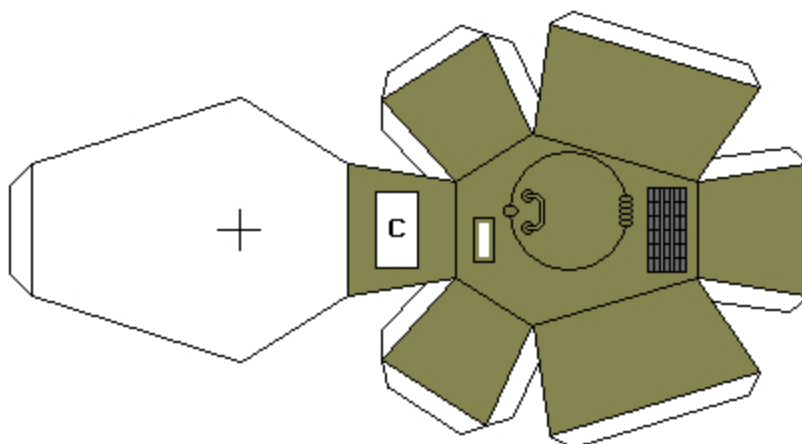

Cut out lower hull assembly and lightly score on all lines to be folded. It may be a good idea to reinforce the top and bottom of the assembly from the inside with additional layers of cardstock or light cardboard. You may want to reinforce the long sides from the inside with cardboard or light wood, like popsicle sticks. Fold sides of hull upward from the bottom of the hull to form a box and glue sides together. Close box by folding tabs at tops of sides inward and gluing the top side of the lower hull assembly. Square the hull up while the glue still allows.

Once the lower hull assembly is well set, it may be glued to the upper hull assembly. Glue the two areas marked "Surface A" together and make sure the bold arrows are pointed the same way so that both hull assemblies are pointed forward.

## D: Gun Tube Assembly

Wrap gun tube tightly around coffee stirrer, bamboo skewer, cocktail stick, or whatever you can get, leaving about 1/8 inches of the stick exposed at the green - not the yellow - end. Tack it with glue to keep it wrapped. Glue the stick end in the gun mount assembly, after the gun mount assembly is attached to the turret.

## E: Turret Assembly

It is easier to pre-cut the + in the bottom of the turret prior to assembly. A small cut about the size of a soda straw will suffice. Carefully cut out the turret and lightly score on all fold lines. Fold the turret closed like a box. The bottom of the turret should be the final part folded and glued shut for the easiest assembly. The gun mount assembly is mounted at point (C).

## F: Commander's Gun
