

## **The North Pole**

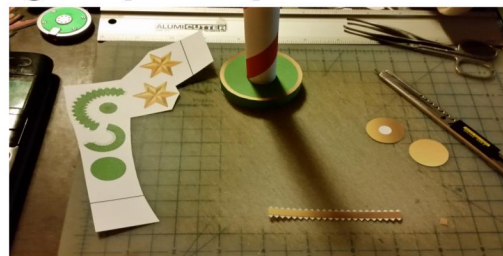

### **Forum Hoard #147 – Christmas Wars**

**The North Pole consists of fifteen (15) parts. There are three parts for the base, three for the pole, three for the gold cap, four for the green dome, and two for the star.**

**Start with the pole. You want to pre-shape the tube. I started by wrapping around a rolling pin, then around a shampoo bottle, then a glue bottle, then smaller tubes and then dowels, until it stays close to the right shape for gluing, then the caps are inserted.**

**Next build the base and gold hockey puck. Cut out the hole in the top of the base. The pole inserts and glues to the bottom. I added aquarium gravel to mine before gluing the pole in place.**

**The green dome consists of two hoops, a base and a cap. The star glues front to back. I would recommend gluing a pin or wire into the star to stick into the dome for extra support.**
